

Step:- 1

Install the following Python libraries before running the project.

```
pip install gspread  
pip install oauth2client  
pip install groq  
pip install schedule  
pip install pywhatkit
```

Step:- 2

Google Cloud Configuration

1. Go to **Google Cloud Console**.
2. Create a new project.
3. Enable **Google Sheets API** and **Google Drive API**.
4. Create a **Service Account**
5. Download the **credentials JSON file**.
6. Share your Google Sheet with the service account email. Present in the JSON file itself.

Step:- 3

Create a sheet named **InvestorMessages** in **Google Sheets**.

Required columns: Name, mobile, message, schedule, category, status, compliance_flag

Rules:-

- **Schedule empty** → **message sent instantly**
- **Schedule present** → **message scheduled**
- Status updated automatically by the system.

Step:- 4

AI Compliance

The system uses **Groq** for message classification.

1. Create an API key from the Groq dashboard.
2. Add the API key in the program:

Approved→ Send / Schedule message
Requires Review→ Block message
Rejected→ Block message

Step:- 5

MessageSending Setup

Requirements:

- WhatsApp Web must be logged in.
- Browser must remain open during execution.

Step:- 6

Execution

Python [main.py](#)

FLOW METHOD:-

- 1.Google Sheet
- 2.Read Pending Rows
- 3.Validate Data
- 4.AI Compliance Check
- 5.Approved → Send/Schedule
- 6.Blocked → Update Status
- 7.Send WhatsApp Message
- 8.Update Sheet Status
